

SAVED BY A HAIR!

Description:

The author, Physician and Veterinary Surgeon, is a specialist in energetic, hollistic and biological medicine.

Member of the Oncologic Society of Biological Medicine in Germany, she coordinates an interdisciplinary clinical research team investigating stress and its more frequent consequences: dermatitis, hiperactivity, hair-loss, allergies, asthma, irritable colon, sexual disfunctions, insomnia, etc...

Having investigated immunological pathologies Dr. Cisneros discovered, amazingly, that genetic alopecia (hair-loss) is of allergen origin.

Dr. Emilio Quintanilla, Director of the Dermatology Department of the Clínica de Navarra and Dr. José Luis González de Rivera, Professor of Psychiatry of the Universidad Autónoma de Madrid supervised the investigation, and have written the prologue to this book.

"Saved by a hair!" offers a simple seven step programme aimed at recuperating overall well-being and treating stress, traumatic after-effects, allergies, asthma, hair loss, irritable colon and sexual disfunctions simply by learning how to benefit more from our body's energy, nutrients and oxygen, how to eliminate rubbish that, otherwise, will contaminate our blood flow and how to avoid foods that produce allergic reactions. The book concludes with testimonials of 10 patients who successfully followed her instructions, with amazing results.
